PROFESSIONAL SUMMARY

Software engineer transitioning into DevOps and AIOps, with hands-on experience in Linux, Docker, Kubernetes, CI/CD, observability, and automation. Builds AI-assisted operations workflows with Python, n8n, Ollama, and multi-provider LLMs, with a current focus on root cause analysis and anomaly-driven operations. Completing the 420-hour NTI AIOps Engineer Track while building an AIOps capstone that injects Kubernetes faults, collects resulting telemetry, and evaluates AI-generated root cause analysis against known ground truth. Brings end-to-end software delivery experience across cross-platform applications, automation systems, and SaaS products.

TECHNICAL SKILLS

DevOps & Infrastructure: Linux, Docker, Kubernetes, WSL2, Terraform (fundamentals), Git, GitHub Actions, CI/CD, GitHub CLI

Observability & AIOps: Prometheus, Grafana, Alerting, Alert Correlation, Root Cause Analysis, Anomaly Detection, Chaos Engineering

AI & Automation: Python, LLM Integration, Ollama, LangGraph, n8n, Webhooks, Multi-Provider AI Orchestration (OpenAI, Claude, Groq, Gemini, OpenRouter)

Backend & Data: PostgreSQL, Supabase (Edge Functions), Firebase, REST APIs, SQL, SQLite, Drift, Hive, NoSQL, Google Sheets API, Data Modeling

Software Engineering: JavaScript, Dart, Flutter, Software Architecture, Clean Code, OOP, Design Patterns, Data Structures & Algorithms, Monorepo (Melos)

SELECTED PROJECTS

Chaos-Grounded Autonomous AIOps Platform

Sep 2026 - Present

NTI AIOps Track capstone | Kubernetes, Docker, WSL2, Python, Ollama, Observability

- Building an AIOps pipeline that injects faults into Kubernetes to create ground-truth incidents, correlates resulting alerts, and uses an AI agent to investigate metrics and logs for root cause analysis.
- Evaluates AI-generated RCA against the known injected fault, making the system measurable rather than purely demonstrative.
- Runs the cluster, observability stack, and self-hosted LLMs through Ollama on a single WSL2-based machine, with no paid APIs or telemetry leaving the environment.

FairMatch: Automated Fair Team Formation System

Sep 2026 - Sep 2026

n8n, JavaScript, Google Sheets API, Python, Webhooks, HTML/CSS

- Built an automated n8n workflow that partitions a 24-person cohort into 4 balanced teams of 6 using multi-objective lexicographic optimization, from raw survey responses to published results.
- Designed a 3-stage pipeline for cleaning, solving, and publishing, with deduplication, missing-data imputation from peer consensus, rating-scale detection, and rater-consistency auditing.
- Implemented 20 multi-start solver runs with multi-level local search; achieved an inter-team skill gap of 0.19 or less, zero hard-constraint violations, and the required gender distribution.
- Published graded rosters (0–100 fairness score, A–F per team) to Google Sheets and Excel, plus a privacy-safe live dashboard; verified identical output against a Python reference implementation.

Omnichannel AI Support: Customer Service Automation Platform

May 2026 - Jun 2026

n8n, Supabase, Groq, Gemini, OpenRouter, Webhooks

- Built an AI customer-service platform that responds automatically on WhatsApp and Telegram, with a Supabase memory layer for persistent conversation context.
- Designed multi-provider AI routing with automatic failover across Groq, Gemini, and OpenRouter to maintain service availability during provider outages and rate limits.
- Added a safety gate that validates every AI response before delivery and improved reliability through log-driven fix cycles on live conversations.
- Preview: eslamnabawy.github.io/Nabawy-s-Portfolio-/projects/ai-workflow-automation

ADDITIONAL ENGINEERING PROJECTS

Brox: B2B Workspace Operations & Business Intelligence Platform

Apr 2026 - Present

Flutter, Dart, Cubit/BLoC, Hive, GoRouter, GitHub Actions

- Developed a coworking-space SaaS covering customers, reservations, memberships, finance, inventory, staff, analytics, and role-based access control.
- Built customer segmentation, loyalty scoring, spending analysis, and a recommendation engine on a modular architecture with GitHub Actions CI/CD.

Rain: Peer-to-Peer Communication Platform

Mar 2026 - Present

Flutter, Dart, WebRTC, Riverpod, Drift, Firebase, Melos, GitHub Actions

- Developed a private Android/Windows platform for peer-to-peer messaging, file transfer, and voice/video calls over WebRTC with encrypted signaling.
- Implemented offline-first persistence, connection lifecycle management, diagnostics, and a multi-package Melos monorepo with GitHub Actions CI/CD.

DevOps Library - DevOps Learning & Resource Platform

Aug 2026 - Sep 2026

GitHub Pages, Linux, Terraform, CI/CD

- Built and published a structured DevOps learning platform covering Linux, Terraform, CI/CD, Kubernetes, Docker, and Ansible.
- Organized practical guides, technical documentation, downloadable resources, and learning materials into dedicated technology tracks.
- Designed the platform as an extensible knowledge hub for hands-on DevOps learning and reference.
- eslamnabawy.github.io/DevOps-By-Nabawy

EDUCATION

Bachelor of Computer Science, Akhbar El-Yom Academy, 6th October City

Oct 2020 - Jul 2024

Grade: 90.40% | Ranked 9th in class

- Graduation project: CampusSuit, a university academic management system (Excellent grade); built the Flutter app for course enrollment, grade and GPA tracking, and student services, integrated with REST APIs in an Agile team.

CERTIFICATIONS & TRAINING

AIOps Engineer Track (IO21), National Telecommunication Institute (NTI)

Jul 2026 - Present

420 hours

- AIOps platforms, Kubernetes and cloud observability, ML-based anomaly detection, SRE practices, communication, leadership, presentation, and project management.

LEADERSHIP & COMMUNITY

Flutter Head, Google Developer Student Clubs (GDSC), Akhbar El-Yom Academy

Oct 2022 - Oct 2023

- Led the Flutter team and delivered sessions on Flutter, application architecture, and state management; co-organized NextGen and Google I/O Extended events.

Core Team Member, ICPC Collegiate Programming, Akhbar El-Yom Academy

Jun 2020 - Oct 2023

- Organized university programming contests and coached participants in data structures, algorithms, and problem solving.
